Computer Science Tutor
Assignment 1

Write a program in C++ that given a year (integer and strictly greater than 0) as input prints the complete calendar as a list from January to December for that year using the following format for each month:

```
September 2011
M  T  W  T  F  S  S
         1  2  3  4
5  6  7  8  9 10 11
Etc.
```

Please note, you should take into account leap years.

Use a clear modular programming style with the right control structures, clear variable names and function names. Use appropriate functions that execute a clear singular task. Use the right amount of comment in your program.

E-mail your complete workspace in a single zip file (cleaned and without any executables) to erwin@liacs.nl with subject "CS Assignment01".
