

## Exercise.

Give a context-free grammar for the language

$$\{a^i x y b^j \mid i, j \geq 0, x, y \in \{a, b\}^*, |x| = j \text{ and } |y| = i\}$$

**Example 6.4.**  $XX = \{xx \mid x \in \{a, b\}^*\}$  is not context-free.

Use  $u = a^n b^n a^n b^n$

### Exercise 6.4.

In the proof given in Example 6.4 using the pumping lemma, the contradiction was obtained in each case by considering the string  $vw^0xy^0z$ .

Would it have been possible instead to use  $vw^2xy^2z$  in each case? If so, give the proof in at least one case; if not, explain why not.

**Example 6.4.**  $XX = \{xx \mid x \in \{a, b\}^*\}$  is not context-free.

Use  $u = a^n b^n a^n b^n$

**Exercise 6.3.**

In the pumping-lemma proof in Example 6.4, give some examples of choices of strings  $u \in L$  with  $|u| \geq n$  that would not work.

## Exercise 6.2.

In each case below, show using the pumping lemma that the given language is not a CFL.

a.  $L = \{a^i b^j c^k \mid i < j < k\}$

b.  $L = \{a^{2^i} \mid i \geq 0\}$

d.  $L = \{a^i b^{2^i} a^i \mid i \geq 0\}$

e.  $L = \{s \in \{a, b, c\}^* \mid n_a(s) = \max\{n_b(s), n_c(s)\}\}$

g.  $L = \{a^i b^j a^i b^{i+j} \mid i, j \geq 0\}$

## Exercise 6.5.

For each case below, decide whether the given language is a CFL, and prove your answer.

a.  $L = \{a^i b^j a^j b^i \mid i, j \geq 0\}$

c.  $L = \{scs \mid s \in \{a, b\}^*\}$

d.  $L = \{sts \mid s, t \in \{a, b\}^* \text{ en } |s| \geq 1\}$

g.  $L =$  the set of non-balanced strings of parentheses

### Exercise 6.6.

If  $L$  is a CFL, does it follow that  $r(L) = \{x^r \mid x \in L\}$  is a CFL?  
Give a proof or a counterexample.

## Exercise 6.9.

In each case below, show that the given language is a CFL but that its complement is not.

**b.**  $\{a^i b^j c^k \mid i \neq j \text{ or } i \neq k\}$

**a.**  $\{a^i b^j c^k \mid i \geq j \text{ or } i \geq k\}$
