Even/odd number of a's/b's

2.1(g) All strings over $\{a, b\}$ in which both the number of *a*'s and the number of *b*'s is even.

2.1(g2) All strings over $\{a, b\}$ in which either the number of a's or the number of b's is odd (or both).

 $L = \{ w \in \{a, b\}^* \mid w \text{ begint en eindigt met een } a, \text{ en } |w| \text{ is even } \}$

Pumping lemma

[M] Fig. 2.28

Regular language is language accepted by an FA.

Theorem

Suppose L is a language over the alphabet Σ . If L is accepted by a finite automaton M, and if n is the number of states of M, then

```
\forall \quad \text{for every } x \in L \\ \text{satisfying } |x| \ge n \\ \end{cases}
```

∃ there are three strings u, v, and w, such that x = uvw and the following three conditions are true:
 (1) |uv| ≤ n,
 (2) |v| ≥ 1

 \forall and (3) for all $m \ge 0$, $uv^m w$ belongs to L

[M] Thm. 2.29

Pumping lemma for regular languages

In other words:

Theorem

- ∀ For every regular language L
- ∃ there exists a constant n ≥ 1 such that
- $\forall \quad \text{for every } x \in L$ with $|x| \ge n$

 $\exists \quad there \ exists \ a \ decomposition \ x = uvw$ $with \ (1) \ |uv| \leq n,$ $and \ (2) \ |v| \geq 1$ $such \ that$

 \forall (3) for all $m \ge 0$, $uv^m w \in L$

if
$$L = L(M)$$
 then $n = |Q|$.

[M] Thm. 2.29

Pumping lemma for regular languages

In other words:

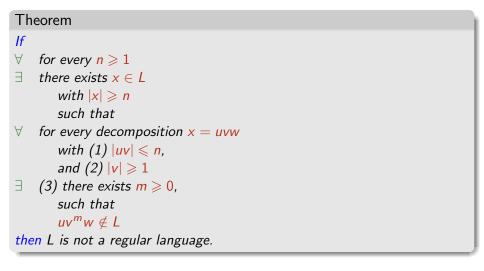

Theorem

- $\begin{array}{l} \textit{If } L \textit{ is a regular language, then} \\ \exists & \textit{there exists a constant } n \geqslant 1 \\ & \textit{such that} \\ \forall & \textit{for every } x \in L \\ & \textit{with } |x| \geqslant n \\ \exists & \textit{there exists a decomposition } x = uvw \\ & \textit{with } (1) |uv| \leqslant n, \\ & \textit{and } (2) |v| \geqslant 1 \\ & \textit{such that} \end{array}$
- \forall (3) for all $m \ge 0$, $uv^m w \in L$

if L = L(M) then n = |Q|.

Introduction to Logic: $p
ightarrow q \iff \neg q
ightarrow \neg p$

Pumping lemma for regular languages

[M] Thm. 2.29

Applying the pumping lemma

Example

 $L = \{a^i b^i \mid i \ge 0\}$ is not accepted by FA.

[M] E 2.30 Proof: by contradiction

We prove that the language $L=\{a^ib^i\mid i\ge 0\}$ is not regular, by contradiction.

Assume that $L = \{a^i b^i \mid i \ge 0\}$ is accepted by FA with *n* states.

Take $x = a^n b^n$. Then $x \in L$, and $|x| = 2n \ge n$.

Thus there exists a decomposition x = uvw such that $|uv| \leq n$ with v nonempty, and $uv^m w \in L$ for every m.

Whatever this decomposition is, v consists of a's only. Consider m = 0. Deleting v from the string x will delete a number of a's. So uv^0w is of the form $a^{n'}b^n$ with n' < n.

This string is not in L; a contradiction. $(m \ge 2 \text{ would also yield contradiction})$

So, L is not regular.

Applying the pumping lemma

Example

 $L = \{a^i b^i \mid i \ge 0\}$ is not accepted by FA.

$\begin{tabular}{ll} \end{tabular} \end{ta$

Combining languages

FA
$$M_i = (Q_i, \Sigma, q_i, A_i, \delta_i)$$
 $i = 1, 2$

Product construction

construct FA $M = (Q, \Sigma, q_0, A, \delta)$ such that

$$-Q=Q_1 imes Q_2$$

$$-q_0 = (q_1, q_2)$$

$$-\delta((p,q),\sigma) = (\delta_1(p,\sigma),\delta_2(q,\sigma))$$

-A as needed

Theorem (2.15 Parallel simulation)

$$-A = \{(p, q) \mid p \in A_1 \text{ or } q \in A_2\}, \text{ then } L(M) = L(M_1) \cup L(M_2)$$

 $-A = \{(p, q) \mid p \in A_1 \text{ and } q \in A_2\}, \text{ then } L(M) = L(M_1) \cap L(M_2)$
 $-A = \{(p, q) \mid p \in A_1 \text{ and } q \notin A_2\}, \text{ then } L(M) = L(M_1) - L(M_2)$

Proof...

[M] Sect 2.2

Automata Theory (Deterministic) Finite Automata

Pumping lemma

< ≞ >

Exactly the same argument can be used (verbatim) to prove that $L={\rm AeqB}$ is not regular.

We can also apply closure properties of REG to see that AeqB is not regular, as follows.

Assume AeqB is regular. Then also $AnBn = AeqB \cap a^*b^*$ is regular, as regular languages are closed under intersection. This is a contradiction, as we just have argued that AnBn is not regular. Thus, also AeqB is not regular. Issues:

- Which *n*? Can I just take *x* = *aababaabbab*?
- Which x? Some x may not yield a contradiction.
- Which decomposition uvw? Can I just take u = a¹⁰, v = aⁿ⁻¹⁰, w = bⁿ ?
- Which *m*? Some *m* may not yield a contradiction.

Example

 $L = \{ x \in \{a, b\}^* \mid n_a(x) > n_b(x) \}$ is not accepted by FA
