Object Tracking

• Conference on Computer Vision and Pattern Recognition (CVPR)

Real-Time Tracking

- A. He et al. A Twofold Siamese Network for Real-Time Object Tracking
- B. Yang et al. PIXOR: Real-Time 3D Object Detection From Point Clouds
- B. Tekin et al., Real-Time Seamless Single Shot 6D Object Pose Prediction

A. He et al. A Twofold Siamese Network for Real-Time Object Tracking, CVPR2018.

- Green is ground truth.
- Purple is tracked by SiamFC.
- Blue is tracked by the novel twofold Siamese network *2FSiamFC*.
- *2FSiamFC* is more robust to shooting angle change and scale change.

A. He et al. A Twofold Siamese Network for Real-Time Object Tracking, CVPR2018.

Object Tracking is a similarity learning problem

- Compare the target image patch with the candidate patches in a search region.
- Track the object to the location where the highest similarity score is obtained.
- Similarity learning with deep CNNs is done using so called Siamese architectures (SiamFC).
- CNNs can process a larger search image where all sub-windows are evaluated as similarity candidates. (Efficient.)

- A-Net is an appearance network.
- The dotted lines is a SiamFC (Fully Convolutional Siamese Network Bertinetto et al. 2016.)
- S-Net is a semantic network.
- The channel attention module determines the weight for each feature channel based on both target and context information.
- Appearance branch and Semantic branch are trained separately.

- Yaojie Liu, et al., Learning Deep Models for Face Anti-Spoofing: Binary or Auxiliary Supervision, CVPR, 2018.
- CVPR2018 58 papers on Face Recognition
- CVPR2019 similar

Yancheng Bai, et al., Finding Tiny Faces in the Wild With Generative Adversarial Network, CVPR, 2018.

Figure 1. The detection results of tiny faces in the wild. (a) is the original low-resolution blurry face, (b) is the result of re-sizing directly by a bi-linear kernel, (c) is the generated image by the super-resolution method, and our result (d) is learned by the super-resolution (\times 4 upscaling) and refinement network simultaneously. Best viewed in color and zoomed in.

Some Qualitative Results Green ground truth, red selected by the network.

Xuanyi Dong, et al., Aggregated Network for Facial Landmark Detection, CVPR2018.

• Landmark detection robust to 'style' changes: dark, light, color, gray. (300-W data set.)

modal dataset for face anti-spoofing, consisting of 492, 522 images with 3 modalities (i.e., RGB, Depth and IR).

F. Mueller, et al., GANerated Hands for Real-Time 3D Hand Tracking From Monocular RGB, CVPR, 2018.

Real-time 3D hand tracking from monocular RGB-only input.

- Works on unconstrained videos from YouTube
- Is robust to occlusions.
- Real-time 3D hand tracking using an off-theshelf RGB webcam in unconstrained setups.

Figure 8: We compare our results with Zimmermann and Brox [63] on three different datasets. Our method is more robust in cluttered scenes and it even correctly retrieves the hand articulation when fingers are hidden behind objects.

Garcia-Hernando, et al., First-Person Hand Action Benchmark With RGB-D Videos and 3D Hand Pose Annotations, CVPR2018.

Pouring Juice

- A novel firstperson action recognition dataset with RGB-D videos and 3D hand pose annotations.
- Magnetic sensors and inverse kinematics to capture the hand pose.
- Also captured 6D object pose for some of the actions

Garcia-Hernando, et al., First-Person Hand Action Benchmark With RGB-D Videos and 3D Hand Pose Annotations, CVPR, 2018.

A novel first person action recognition dataset with RGB-D videos and 3D hand pose annotations.

- Put sugar.
- Pour milk.
- Charge cell-phone.
- Shake hand.

Garcia-Hernando, et al., First-Person Hand Action Benchmark With RGB-D Videos and 3D Hand Pose Annotations, CVPR, 2018. Visual data: Intel RealSense SR300 RGB-D camera on the shoulder of the subject (RGB 30 fps at 1920×1080 and Depth 640×480.) Pose annotation: hand pose captured using six magnetic sensors (6DOF) attached to the user's hand, five fingertips and one wrist, following [84]. Close Use Card Drink Take Out Match the hand pose is inferred using inverse kinematics over a defined 21-joint hand model Hand Actions Open Letter Open 🦱 Close Pen object pose Use 🦳 Kitcher Office 🔵 Put d 1 6DOF magnetic sensor attached to the closest point to the center of mass. Squeeze © Open Tear Read Put ● S_{COOP} Clean Recording process: Sprinkle Unfold • 6 people, all right handed performed the actions.

Garcia-Hernando, et al., First-Person Hand Action Benchmark With RGB-D Videos and 3D Hand Pose Annotations, CVPR2018.

Baseline: RNN LSTM 100 neurons.

- 1:3 25% training 75% testing
- 1:1 50% 50%
- 3:1 75% 25%

Cross-person

Leave one of the 6 persons out of the training and test on the person left out.

Tensorflow and Adam optimizer.

 evaluated approaches on our proposed dataset.

Some Problems with Deep Neural Networks K. Eykholt, et al. Dawn Song Robust Physical-World Attacks on Deep

K. Eykholt, et al. Dawn Song Robust Physical-World Attacks on Deep Learning Visual Classification, CVPR2018.

Robust Physical Perturbations (RP2):

- generate physical perturbations for physical-world objects such that a DNN-based classifier produces a designated misclassification.
- This under a range of dynamic physical conditions, including different viewpoint angles and distances.

K. Eykholt, et al. Dawn Song Robust Physical-World Attacks on Deep Learning Visual Classification, CVPR2018.

K. Eykholt, et al. Dawn Song Robust Physical-World Attacks on Deep Learning Visual Classification, CVPR2018.

This is a micro-wave.

This is not a micro-wave.
