Robotic Vision

E.M. Bakker

Organization and Overview

Lecturer:
Dr Erwin M. Bakker (erwin@liacs.nl)
Room 126a and LIACS Media Lab (LML)

Teaching assistants:
Xia Tian
Aristidou Kyriakos
Dimitrios Kourntidis
Ruilin Ma

Period: February 5th - May 21st 2024
Time: Monday 15.15 - 17.00
Place (Rooms):
a) LMUY Havingazaal

2nd Session for ACS students and upon individual request:
Time: 17.15 – 19.00
Place: Room 4.02 Snellius Building

Schedule (tentative, visit regularly):

Date	Subject
5-2	Introduction and Overview
12-2	Locomotion and Inverse Kinematics
19-2	Robotics Sensors and Image Processing
26-2	No Class.
4-3	SLAM + Workshop@Home
11-3	Robotics Vision + Intro Mobile Robot Challenge
18-3	Project Proposals I (by students)
25-3	Project Proposals II (by students) *
1-4	No Class (Eastern)
8-4	Robotics Reinforcement Learning + Workshop@Home
15-4	Project Progress Reports I
22-4	Project Progress Reports II
29-4	Mobile Robot Challenge I
6-5	Mobile Robot Challenge II
13-5	Project Demos I -
20-5	No Class (Whit Monday)
27-5	Project Demos II
7-6	Project Deliverables

Grading (6 ECTS):
- Presentations and Robotics Project (60% of grade).
- Class discussions, attendance, assignments (pass/no pass) 2 workshops (0-10) (20% of the grade).

  Mobile Robot Challenge (0-10) (20% of the grade)
- ***It is necessary to be at every class and to complete every workshop and assignment.***

OpenCV

- Low level image processing.
- Convolutional Kernels: filters, edge detectors, etc.

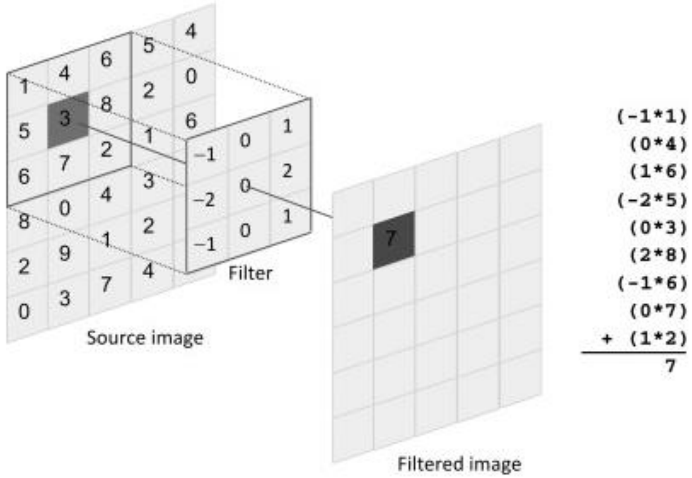

Image from [1].

The general expression of a convolution is

$$g(x,y) = \omega * f(x,y) = \sum_{s=-a}^{a} \sum_{t=-b}^{b} \omega(s,t) f(x-s, y-t),$$

where $g(x,y)$ is the filtered image, $f(x,y)$ is the original image, ω is the filter kernel. Every element of the filter kernel is considered by $-a \leq s \leq a$ and $-b \leq t \leq b$.

COCO:
Common Objects in Context
https://cocodataset.org

COCO is a large-scale object detection, segmentation, and captioning dataset. COCO has several features:

- ✔ Object segmentation
- ✔ Recognition in context
- ✔ Superpixel stuff segmentation
- ✔ 330K images (>200K labeled)
- ✔ 1.5 million object instances
- ✔ 80 object categories
- ✔ 91 stuff categories
- ✔ 5 captions per image
- ✔ 250,000 people with keypoints

A. He et al. A Twofold Siamese Network for Real-Time Object Tracking, CVPR2018.

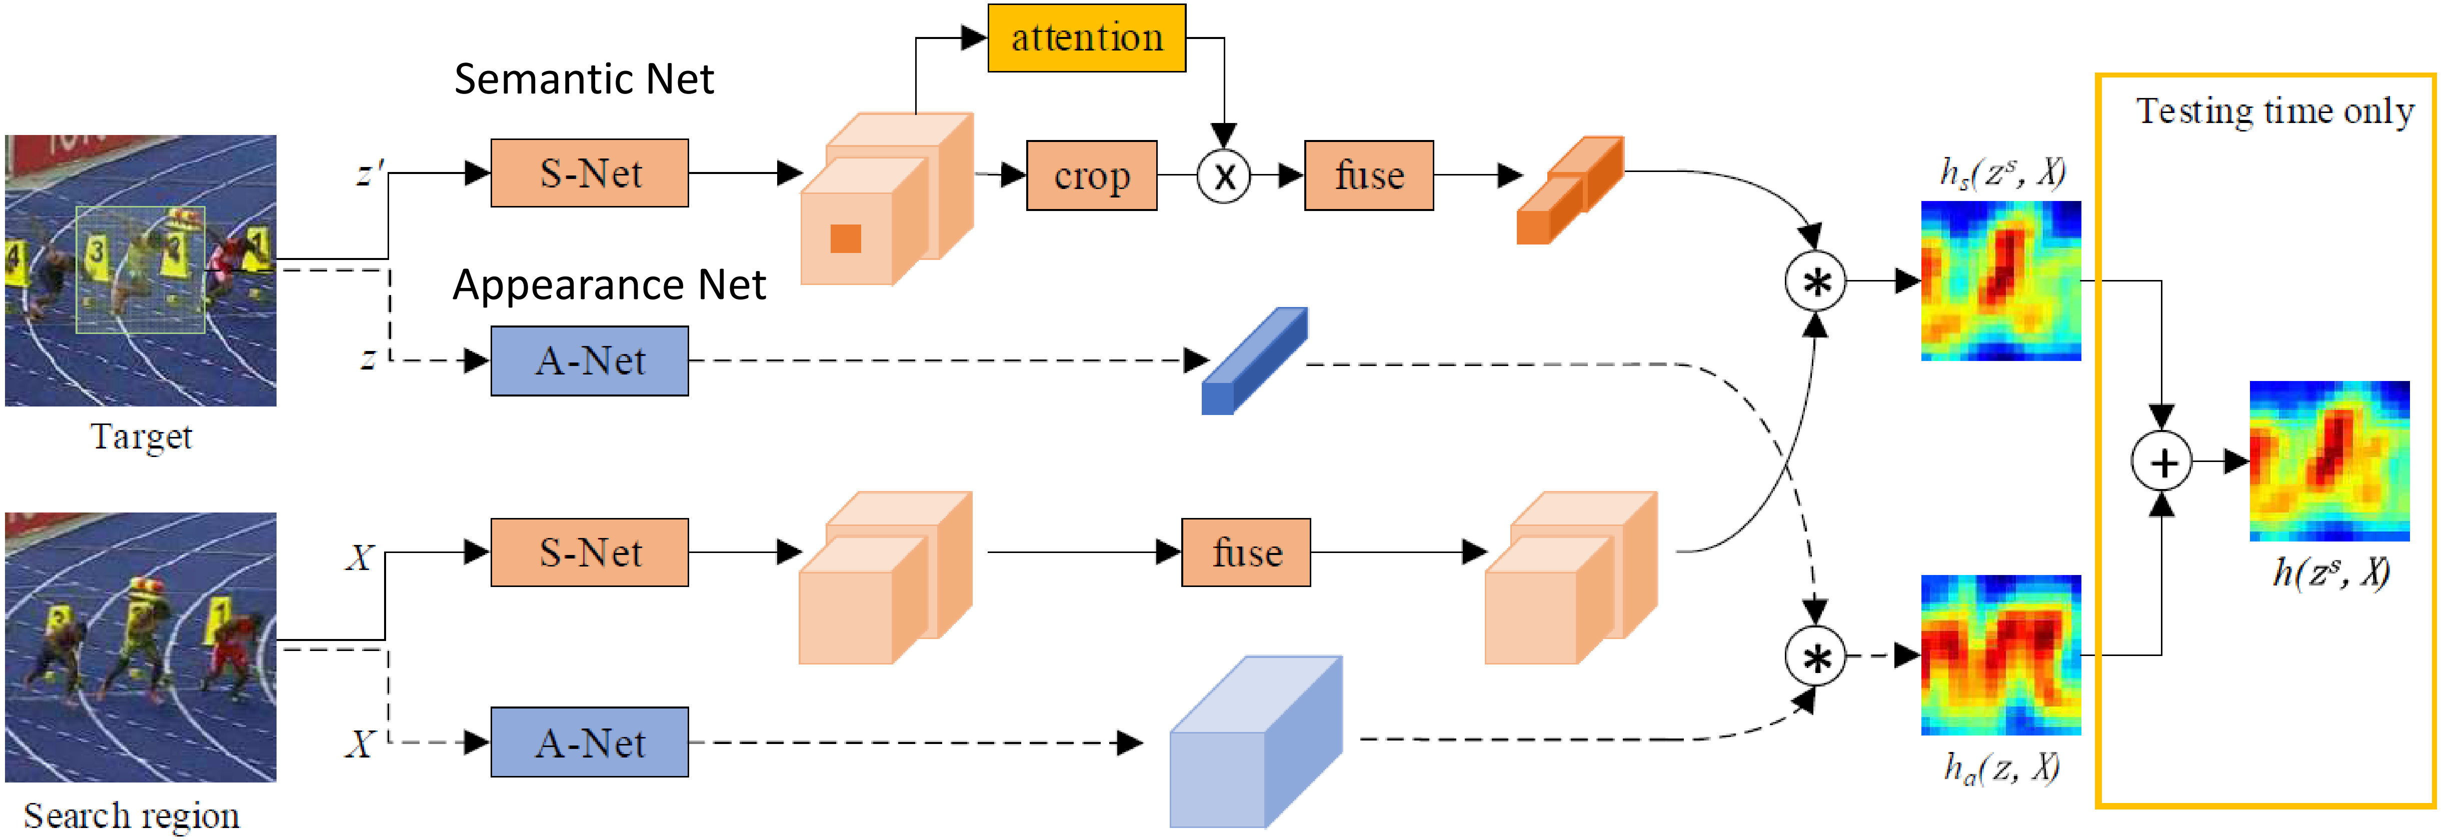
- Green is ground truth.
- Purple is tracked by *SiamFC*.
- Blue is tracked by the novel twofold Siamese network *2FSiamFC*.
- *2FSiamFC* is more robust to shooting angle change and scale change.

A. He et al. A Twofold Siamese Network for Real-Time Object Tracking, CVPR2018.

Object Tracking is a similarity learning problem

- Compare target image patch with candidate patches in a search region
- Track object to the location whit highest similarity score

- Similarity learning with deep CNNs use so called Siamese architectures (SiamFC).
- CNNs can process a larger search image where all sub-windows are evaluated as similarity candidates. (Efficient.)



- A-Net is an appearance network, and S-Net is a semantic Network. (Branches trained separately.)
- The dotted lines is a SiamFC (Fully Convolutional Siamese Network Bertinetto et al. 2016.)
- The channel attention module determines the weight for each feature channel based on both target and context information.

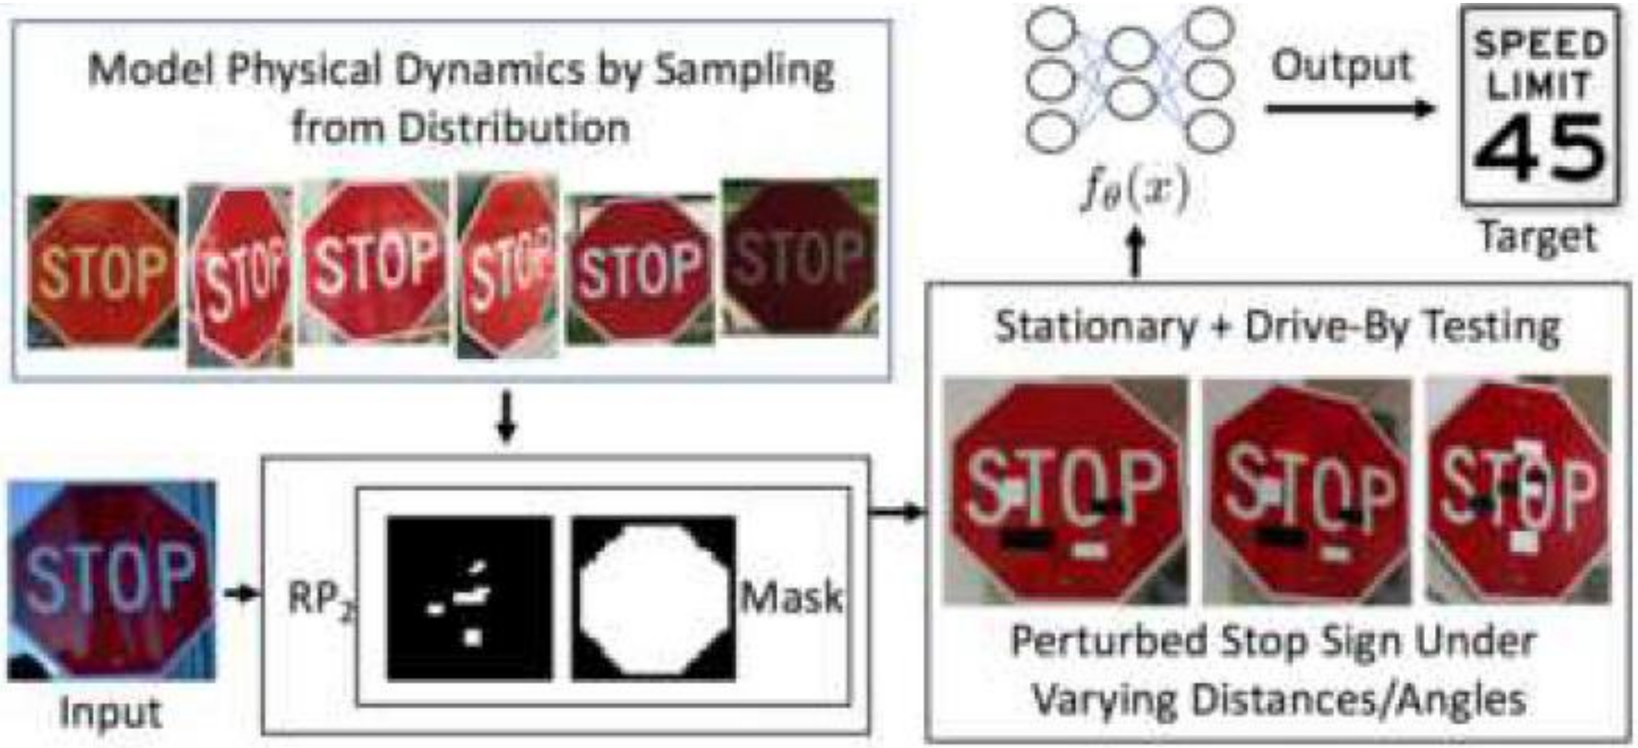
Some Problems with Deep Neural Networks

K. Eykholt, et al. Dawn Song Robust Physical-World Attacks on Deep Learning Visual Classification, CVPR2018.

K. Eykholt, et al. Dawn Song Robust Physical-World Attacks on Deep Learning Visual Classification, CVPR2018.

Robust Physical Perturbations (RP2):
- generate physical perturbations for physical-world objects such that a DNN-based classifier produces a designated misclassification.
- This under a range of dynamic physical conditions, including different viewpoint angles and distances.



K. Eykholt, et al. Dawn Song Robust Physical-World Attacks on Deep Learning Visual Classification, CVPR2018.

Two types of attacks showing that RP2 produces robust perturbations for real road signs.

- poster attacks are successful in 100% of stationary and drive-by tests against LISA-CNN
- sticker attacks are successful in 80% of stationary testing conditions

K. Eykholt, et al. Dawn Song Robust Physical-World Attacks on Deep Learning Visual Classification, CVPR2018.

This is a micro-wave.

This is not a micro-wave.

Yuxin Xiong, Adversarial Detection and Defense in Deep learning, 2021

Adversarial attacks on DNNs in e.g. autonomous driving and facial recognition.

- Adversarial examples constructed by shapeshifter
- robust to distortions at different distances and angles, etc.

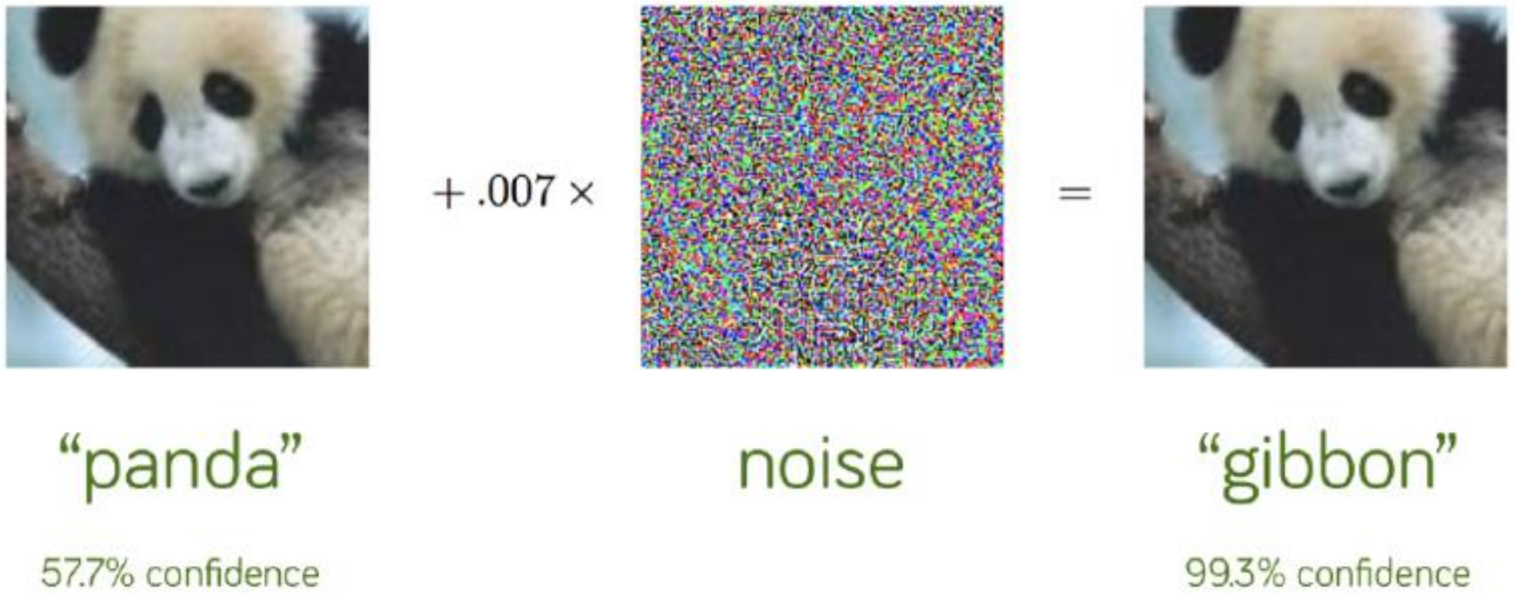
UNMASK[15] a framework to detect and defend against attacks:

- extract features by semantic segmentation technique.
- compare extracted features to detect if input image is benign
- counter against attacks by refining to the correct class.

Modified UNMASK model for Resnet101:

- add 4 feature denoising blocks: robust to various attacks
- improves UNMASK against several types of attacks

Adversarial Examples



Ian J Goodfellow, Jonathon Shlens, and Christian Szegedy. Explaining and harnessing adversarial examples. in ICLR, 2015.

Shapeshifter

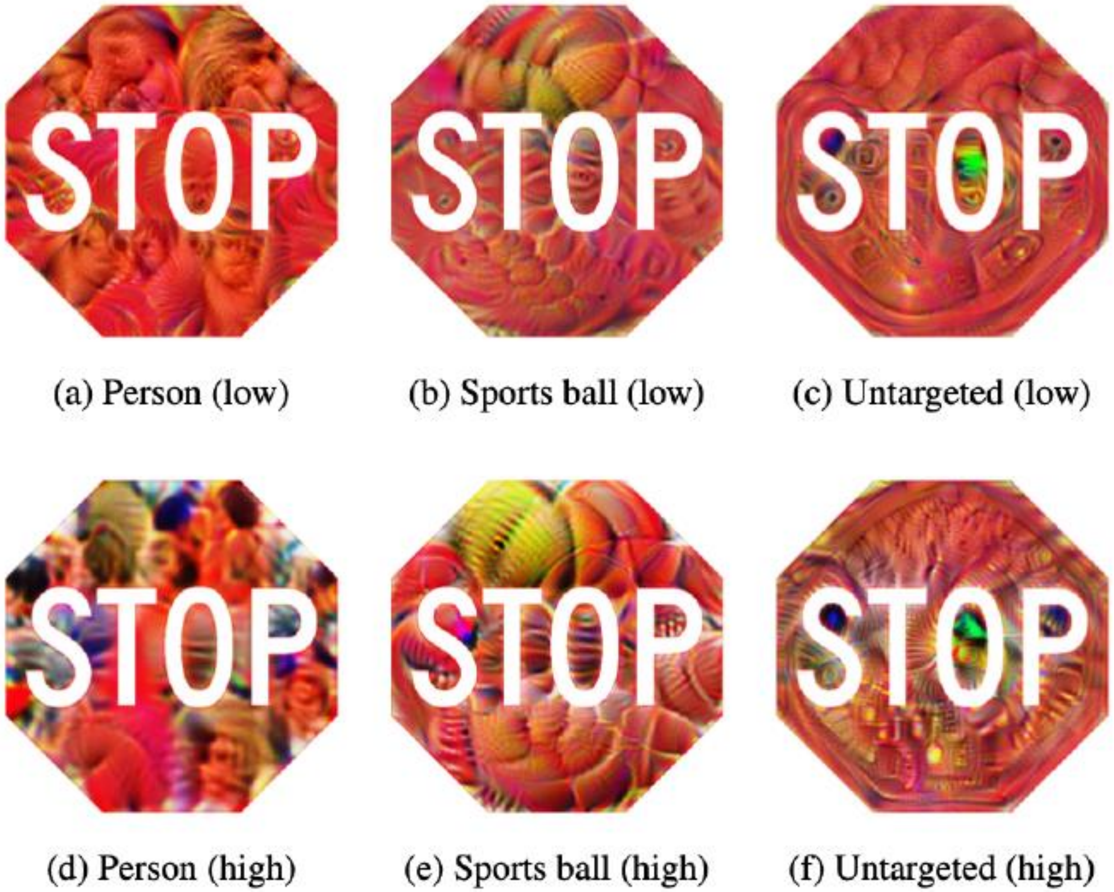


Figure 4: Adversarial examples generated by Shapeshifter with "low" and "high" confidence(perturbation strength). Shapeshifter can perform both targeted attacks and non-target attacks.

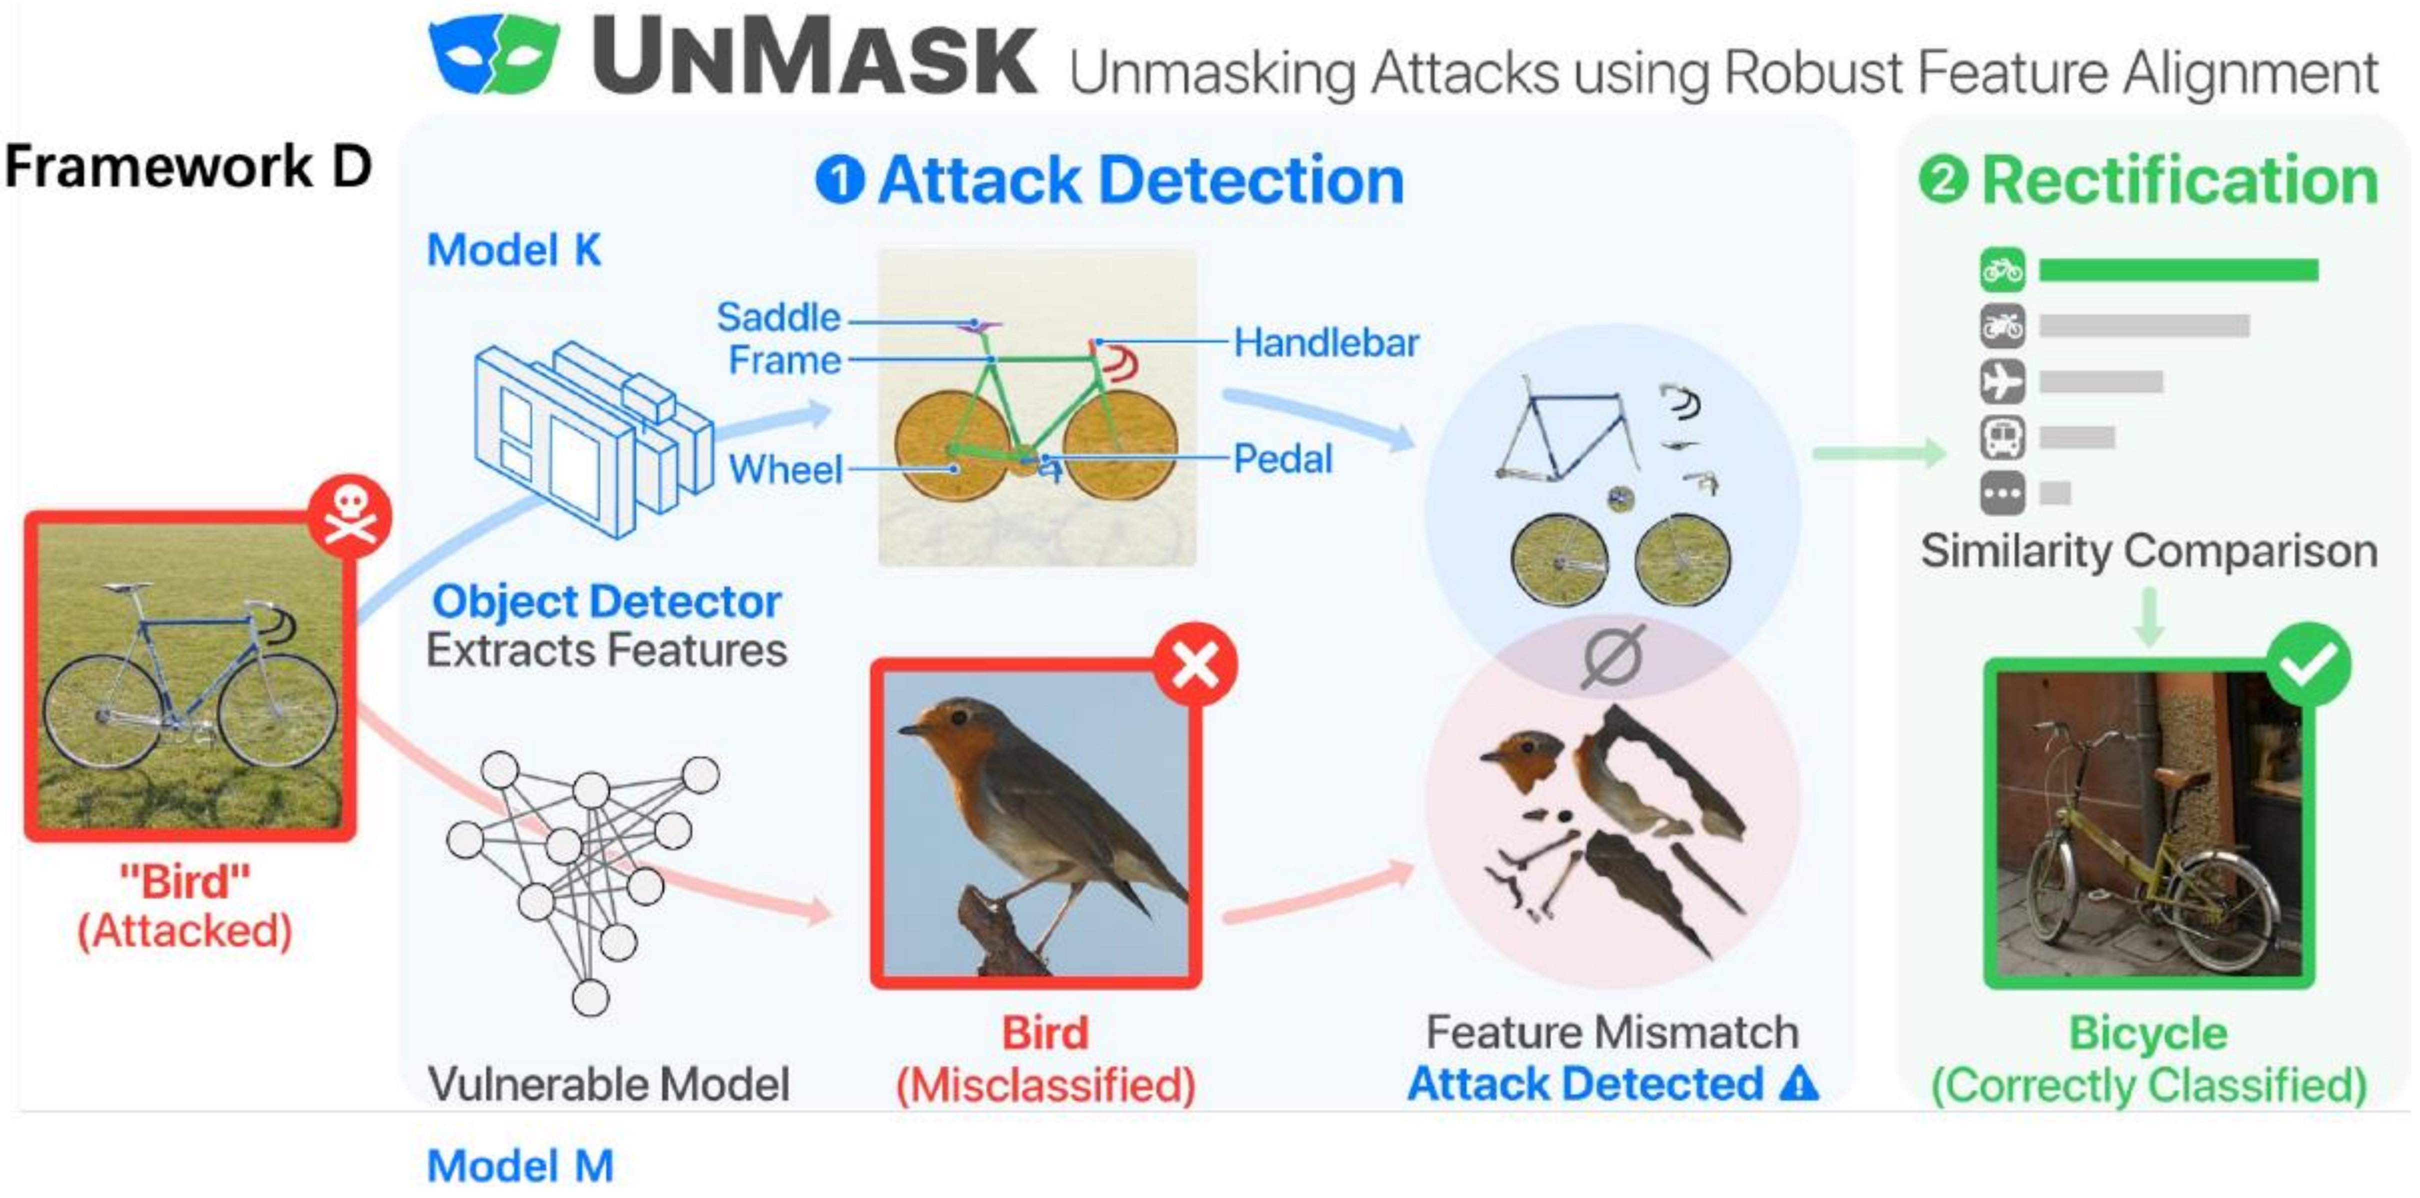

Figure 6: An overview of UNMASK framework. [3]

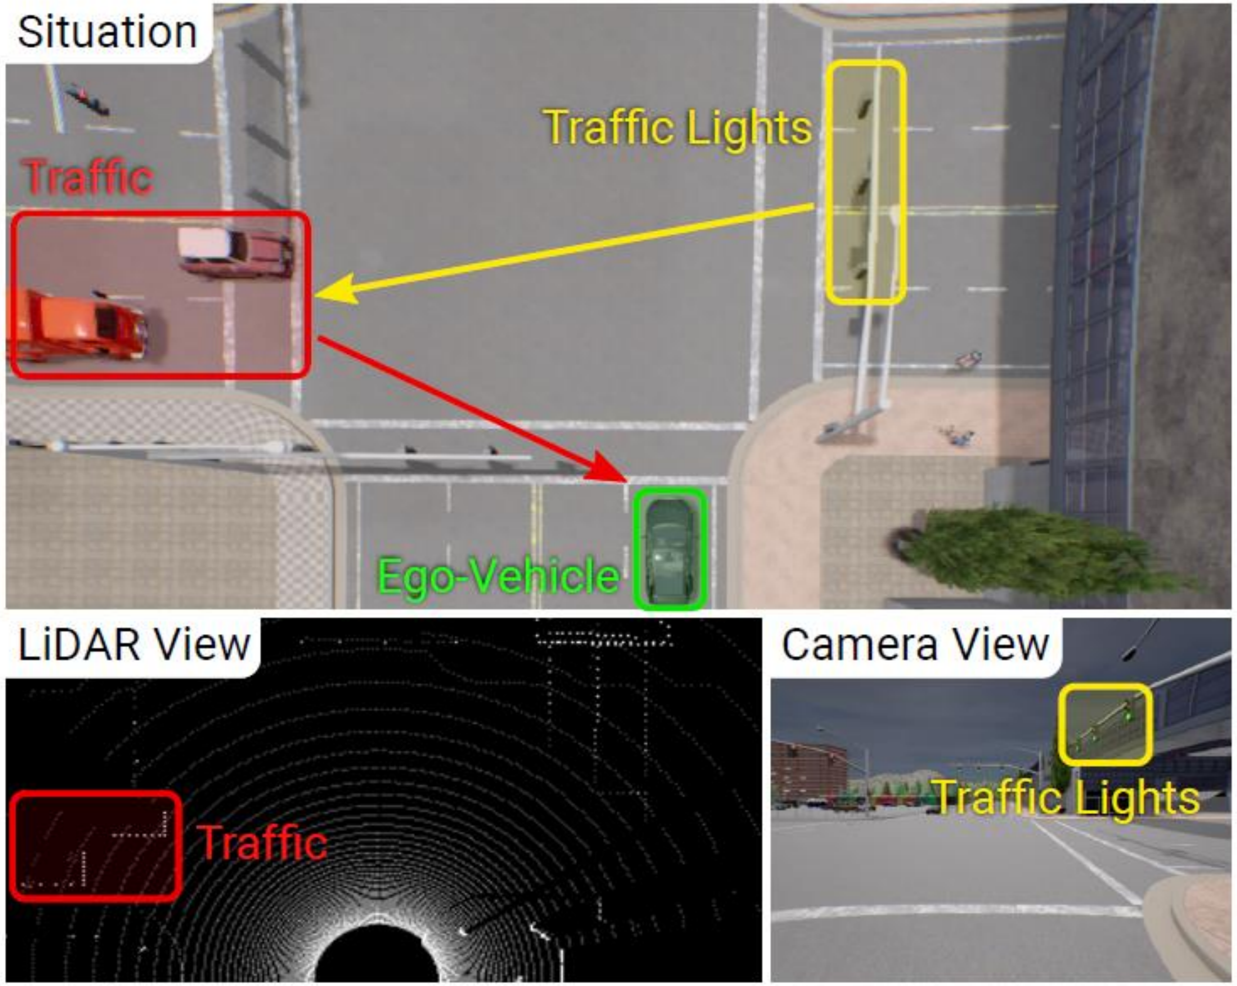
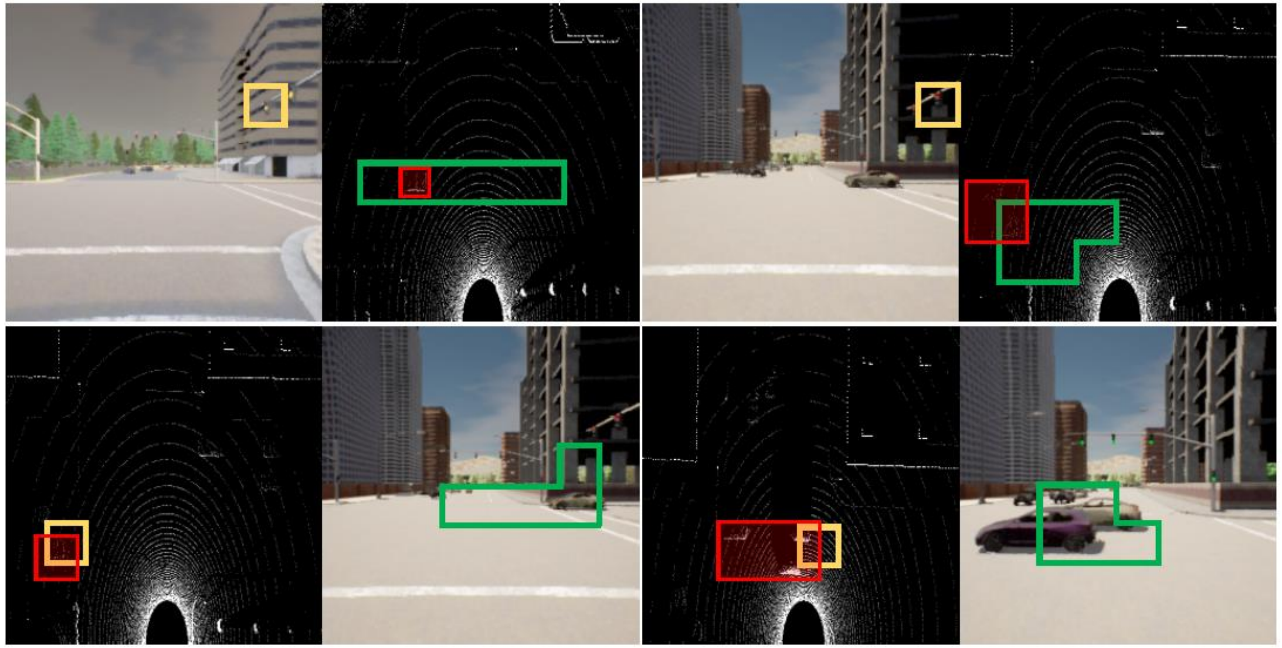
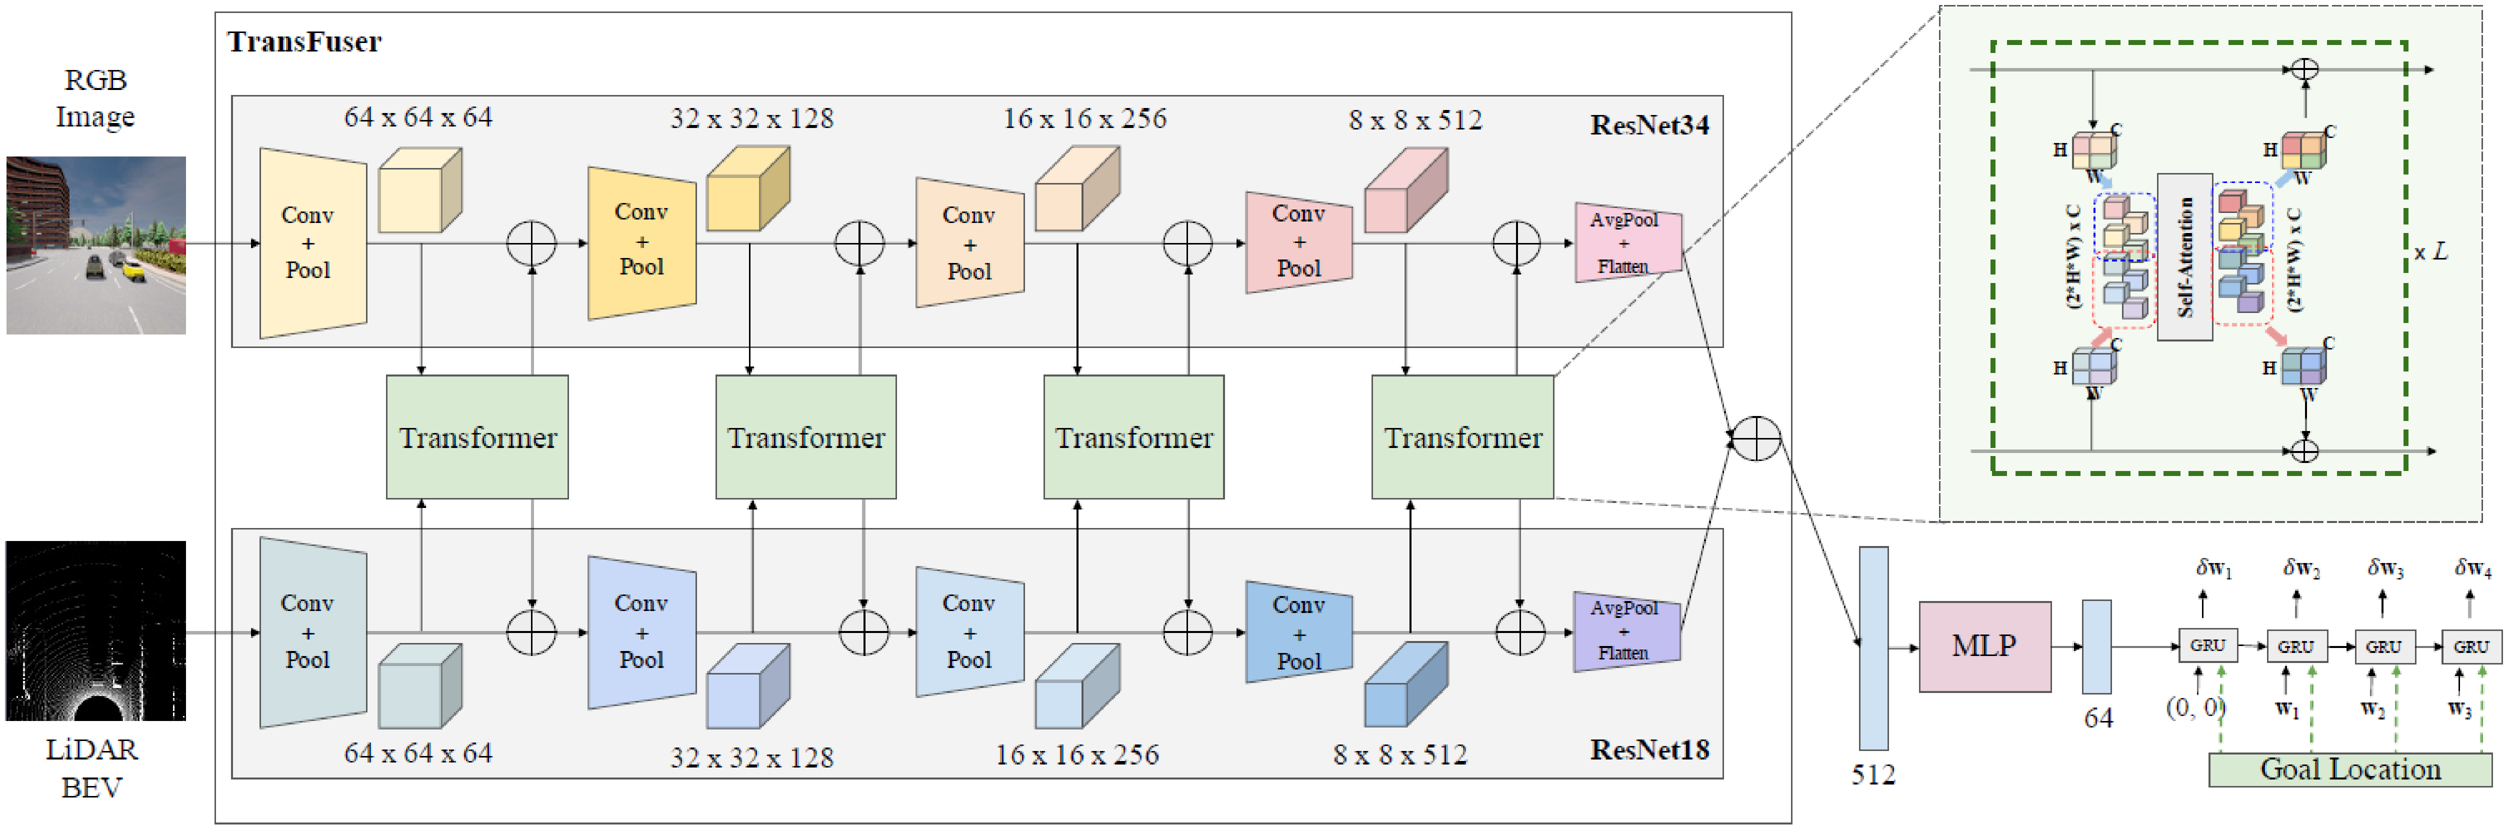
Ceci n'est pas une pipe.
Magritte

A. Prakash et al., Multi-Modal Fusion Transformer for End-to-End Autonomous Driving, CVPR2021





Attention Maps: yellow query token, red vehicle in lidar.
=> Green top-5 attended tokens.



The TransFuser uses attention to capture the global 3D scene context and focuses on dynamic agents and traffic lights, resulting in state-of-the-art performance on CARLA.

Method	Town05 Short		Town05 Long	
	DS ↑	RC ↑	DS ↑	RC ↑
CILRS [16]	7.47 ± 2.51	13.40 ± 1.09	3.68 ± 2.16	7.19 ± 2.95
LBC [8]	30.97 ± 4.17	55.01 ± 5.14	7.05 ± 2.13	32.09 ± 7.40
AIM	49.00 ± 6.83	81.07 ± 15.59	26.50 ± 4.82	60.66 ± 7.66
Late Fusion	51.56 ± 5.24	83.66 ± 11.04	31.30 ± 5.53	68.05 ± 5.39
Geometric Fusion	54.32 ± 4.85	**86.91** ± 10.85	25.30 ± 4.08	**69.17** ± 11.07
TransFuser (Ours)	**54.52** ± 4.29	78.41 ± 3.75	**33.15** ± 4.04	56.36 ± 7.14
Expert	*84.67 ± 6.21*	*98.59 ± 2.17*	*38.60 ± 4.00*	*77.47 ± 1.86*

Mean and stdev on Route Completion (RC) and Driving Score (DS) in 2 Town Settings with high densities of dynamic agents and scenario’s over a total of 9 runs.

Organization and Overview

Lecturer:
Dr Erwin M. Bakker (erwin@liacs.nl)
Room 126a and LIACS Media Lab (LML)

Teaching assistants:
Xia Tian
Aristidou Kyriakos
Dimitrios Kourntidis
Ruilin Ma

Period: February 5th - May 21st 2024
Time: Monday 15.15 - 17.00
Place (Rooms):
a) LMUY Havingazaal

2nd Session for ACS students and upon individual request:
Time: 17.15 – 19.00
Place: Room 4.02 Snellius Building

Schedule (tentative, visit regularly):

Date	Subject
5-2	Introduction and Overview
12-2	Locomotion and Inverse Kinematics
19-2	Robotics Sensors and Image Processing
26-2	No Class.
4-3	SLAM + Workshop@Home
11-3	Robotics Vision + Intro Mobile Robot Challenge
18-3	Project Proposals I (by students)
25-3	Project Proposals II (by students) *
1-4	No Class (Eastern)
8-4	Robotics Reinforcement Learning + Workshop@Home
15-4	Project Progress Reports I
22-4	Project Progress Reports II
29-4	Mobile Robot Challenge I
6-5	Mobile Robot Challenge II
13-5	Project Demos I -
20-5	No Class (Whit Monday)
27-5	Project Demos II
7-6	Project Deliverables

Grading (6 ECTS):

- Presentations and Robotics Project (60% of grade).
- Class discussions, attendance, assignments (pass/no pass) 2 workshops (0-10) (20% of the grade).

Mobile Robot Challenge (0-10) (20% of the grade)

- ***It is necessary to be at every class and to complete every workshop and assignment.***

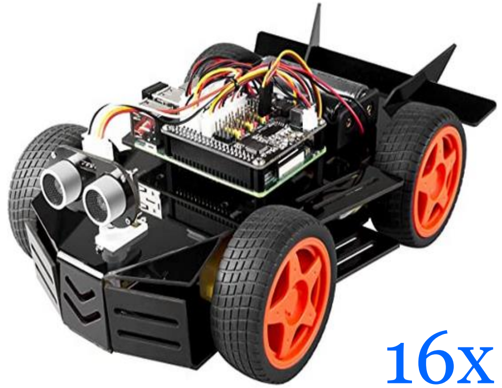
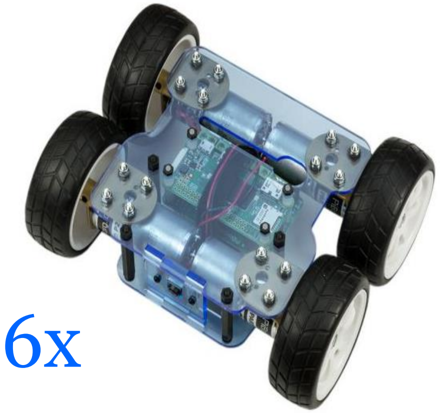
Next week INTRODUCTION MOBILE ROBOT CHALLENGE

Groups of 4 to 5 students

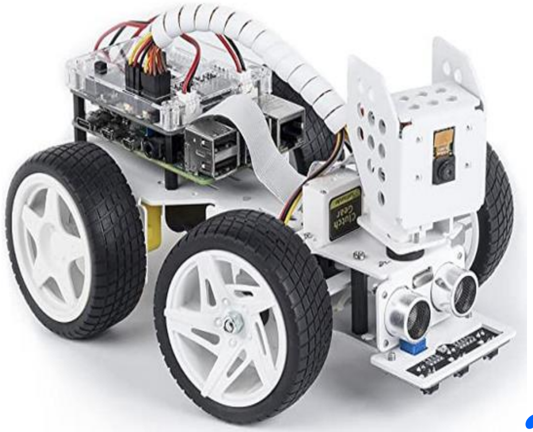
3x



16x



6x



2x

Assignments: due Thursday March 14th 2024

See Brightspace, every team member should submit the respective completed pdf.

1. Robotics Final Project Teams
2. Mobile Robot Challenge Teams
