## Homework 2

Task1: Prove the identity of each of the following Boolean equations, using algebraic manipulations:

1) $\mathrm{AB}+\mathrm{BC}^{\prime} \mathrm{D}^{\prime}+\mathrm{A}^{\prime} \mathrm{BC}+\mathrm{C}^{\prime} \mathrm{D}=\mathrm{B}+\mathrm{C}^{\prime} \mathrm{D}$
2) $W Y+W^{\prime} Y Z^{\prime}+W X Z+W^{\prime} X Y^{\prime}=W Y+W^{\prime} X Z^{\prime}+X^{\prime} Y Z^{\prime}+X Y^{\prime} Z$
3) $\mathrm{AC}^{\prime}+\mathrm{A}^{\prime} \mathrm{B}+\mathrm{B}^{\prime} \mathrm{C}+\mathrm{D}^{\prime}=\left(\mathrm{A}^{\prime}+\mathrm{B}^{\prime}+\mathrm{C}^{\prime}+\mathrm{D}^{\prime}\right)\left(\mathrm{A}+\mathrm{B}+\mathrm{C}+\mathrm{D}^{\prime}\right)$

Task2: Find the complement of the following Boolean functions:

1) $\mathrm{F} 1=\mathrm{AB}+\mathrm{A}^{\prime} \mathrm{B}$
2) $F 2=\left(V^{\prime} W+X\right) Y+Z^{\prime}$
3) $F 3=W X\left(Y^{\prime} Z+Y Z^{\prime}\right)+W^{\prime} X^{\prime}\left(Y^{\prime}+Z\right)\left(Y+Z^{\prime}\right)$
4) $\mathrm{F} 4=\left(\mathrm{A}+\mathrm{B}^{\prime}+\mathrm{C}\right)\left(\mathrm{A}^{\prime} \mathrm{B}^{\prime}+\mathrm{C}\right)\left(\mathrm{A}+\mathrm{B}^{\prime} \mathrm{C}^{\prime}\right)$

Task3: Convert the following Boolean functions into Canonical SOP and Canonical POS forms:

1) $\mathrm{F} 1=(\mathrm{AB}+\mathrm{C})(\mathrm{B}+\mathrm{C} \mathrm{D})$
2) $F 2=X^{\prime}+X\left(X+Y^{\prime}\right)\left(Y+Z^{\prime}\right)$
3) $\mathrm{F} 3=\left(\mathrm{A}+\mathrm{BC}^{\prime}+\mathrm{CD}\right)\left(\mathrm{B}^{\prime}+\mathrm{EF}\right)$

For the three tasks above you should show each step in your solution. Don't give only the final result!
