**Exercise 4.26.** In each part, draw an NFA (which might be an FA) accepting the language generated by the CFG having the given productions.

a.

 $S \to aA \mid bC \quad A \to aS \mid bB \quad B \to aC \mid bA \quad C \to aB \mid bS \mid \Lambda$ 

## Exercise 4.27.

Find a regular grammar generating the language L(M), where M is the FA shown below:

## Exercise 4.22.

Show that if G is a context-free grammar in which every production has one of the forms

$$A \to aB, \quad A \to a \quad \text{and} \ A \to \Lambda$$

(where A and B are variables and a is a terminal), then L(G) is regular.

Suggestion: construct an NFA accepting L(G), in which there is a state for each variable in G and one additional state F, the only accepting state.

## Exercise 4.28.

Draw an NFA accepting the language generated by the grammar with productions

 $S \rightarrow abA \mid bB \mid aba$   $A \rightarrow b \mid aB \mid bA$   $B \rightarrow aB \mid aA$ 

### Exercise 4.29.

Each of the following grammars, though not regular, generates a regular language. In each case, find a regular grammar generating the language.

**a.**  $S \rightarrow SSS \mid a \mid ab$ 

**b.**  $S \rightarrow AabB$   $A \rightarrow aA \mid bA \mid \land B \rightarrow Bab \mid Bb \mid ab \mid b$ 

# Exercise 4.34.

# Show that the CFG with productions

$$S \rightarrow a \mid Sa \mid bSS \mid SSb \mid SbS$$

is ambiguous.

#### Exercise 4.36.

In each case below, decide whether the grammar is ambiguous or not, and prove your answer.

**b.**  $S \rightarrow SS \mid bS \mid a$ 

**c.**  $S \rightarrow SaS \mid b$ 

**e.**  $S \rightarrow TT$   $T \rightarrow aT \mid Ta \mid b$ 

**f.**  $S \rightarrow aSa \mid bSb \mid aAb \mid bAa$   $A \rightarrow aAa \mid bAb \mid a \mid b \mid \Lambda$ 

**g.**  $S \to aT \mid bT \mid \Lambda$   $T \to aS \mid bS$ 

### Exercise 4.38.

In each case below, show that the grammar is ambiguous, and find an equivalent unambiguous grammar.

- **a.**  $S \rightarrow SS \mid a \mid b$  **b.**  $S \rightarrow ABA$   $A \rightarrow aA \mid \Lambda$   $B \rightarrow bB \mid \Lambda$ **c.**  $S \rightarrow aSb \mid aaSb \mid \Lambda$
- **d.**  $S \rightarrow aSb \mid abS \mid \Lambda$

#### Exercise.

Let G be a context-free grammar with start variable S and the following productions:

$$S \to aSbS \mid bSaS \mid \Lambda$$

**a.** Show that  $L(G) = AEqB = \{x \in \{a, b\}^* \mid n_a(x) = n_b(x)\}$ 

**b.** Is G ambiguous? Motivate your answer.
